Generative Engine Optimization Audit

A comprehensive 18-point GEO roadmap to maximize visibility in AI
Overviews, semantic search, and traditional SEO — for skinchange.dk
and skinchange-website.

PREPARED

PRIORITY

18 Action Items

OVERVIEW

Executive Summary

This document is a structured Generative Engine Optimization (GEO) audit for SkinChange.AI ApS. GEO is the discipline of optimizing web content specifically for how AI systems — including ChatGPT, Google AI Overviews, Perplexity, and Bing Copilot — discover, understand, and reference your content in generated answers.

Based on a full technical audit of the Next.js website, the analysis covers all pages including the homepage, 19 disease-specific blog articles, the FAQ hub and sub-pages, the user guide, the about page, and the download/app page.

◆ **Current standing:** SkinChange has a strong SEO foundation — proper hreflang, JSON-LD schemas, canonical URLs, and dual-language support are all in place. The primary gap is **GEO-specific** — missing schema types (HowTo, SpeakableSpecification, MedicalCode/ICD-11), thin FAQ answers, content depth, and infrastructure issues (plain-text fallbacks) that block AI visibility.

What You Already Have

JSON-LD Structured Data

MedicalOrganization, Physician, Service, FAQPage, and Article schemas are implemented across the site.

Dual-Language Support

Full DA/EN routing via Next.js [lang] parameter with correct hreflang tags.

Open Graph + Twitter Cards

Social sharing metadata with branded og:image across all pages.

Sitemap + Robots.txt

Properly configured with hreflang alternates and crawl directives.

19 Disease Blog Articles

Fast Static Site

Well-structured medical content with FAQPage schema for each article.

Next.js static generation delivers fast Core Web Vitals performance.

CRITICAL ISSUES

Part 1 — Critical GEO Gaps

The items below are actively blocking AI visibility. They should be fixed before anything else.

● 1. Plain-Text Blog Fallbacks Destroying Schema CRITICAL

Problem: Every blog article generates two output files — `index.html` (full HTML + JSON-LD) and `index.txt` (raw text, zero schema). AI crawlers hitting the `.txt` URLs see an unstyled page with no structured data, no navigation, and no markup.

Example output in `/dist/da/blog/acne/`:

```
/dist/da/blog/acne/index.html  ← ✓ Full HTML with schema
/dist/da/blog/acne/index.txt    ← ✗ Plain text, no schema, no HTML
```

Action: Delete all `index.txt` files from `/dist/` and reconfigure the build pipeline to stop generating them. Run this to find all instances:

```
find /dist -name "index.txt" -delete
```

● 2. Missing HowTo Schema on Guide Page CRITICAL

The guide page (`/da/guide/`) teaches users how to use the SKIND app step-by-step. This is a prime target for **HowTo rich results** — a schema type that Google AI Overviews pulls from directly into featured answers.

Currently: **No HowTo schema.**

REQUIRED ADDITION — SRC/APP/[LANG]/GUIDE/PAGE.TSX

```
{
  "@type": "HowTo",
  "name": "Sådan bruger du SKIND appen",
  "description": "Komplet guide til at oprette din undersøgelse i SKIND appen",
  "step": [
    {
      "@type": "HowToStep",
      "name": "Download SKIND appen",
      "text": "Download SKIND fra App Store eller Google Play og opret en konto med MitID."
    },
    {
```

```

    "@type": "HowToStep",
    "name": "Tag billeder af dit hudproblem",
    "text": " Brug appens kamera til at tage klare, godt oplyste billeder af det berørte område fra flere vinkler.",
  },
  {
    "@type": "HowToStep",
    "name": "Besvar spørgsmål om dine symptomer",
    "text": "Svar på simple spørgsmål om varighed, symptomer og sygehistorie for at hjælpe hudlægen."
  },
  {
    "@type": "HowToStep",
    "name": "Modtag din diagnose",
    "text": "En certificeret Speciallæge i hudsygdomme gennemgår din sag og sender diagnose og behandlingsplan."
  }
]
}

```

● 3. No SpeakableSpecification for AI Overviews

CRITICAL

Google's AI Overviews on medical content require `SpeakableSpecification` — this marks which parts of a page are safe for AI to quote directly in search summaries. **Currently missing from all Article and FAQPage schemas.**

REQUIRED ADDITION — INSIDE ARTICLE / FAQPAGE SCHEMA

```

"speech": {
  "@type": "SpeakableSpecification",
  "cssSelector": ["h1", "h2"]
}

```

Add this to the homepage FAQPage schema and all 19 blog article schemas. For blog articles, use ["h1", "h2", ".prose h3"] as selectors.

● 4. Shallow Author Schema — E-E-A-T Gap

CRITICAL

Peter Bjerring is referenced in schema as:

```

{
  "@type": "Person",
  "@id": "https://www.skinchange.dk/#peter-bjerring",
  "name": "Peter Bjerring"
  // ❌ Missing: url, jobTitle, worksFor @id, alumniOf, knowsAbout, description
}

```

AI engines use **E-E-A-T** (Experience, Expertise, Authoritativeness, Trustworthiness) as a core health content signal. The current Person schema has no verifiable credentials, no author page, and no way for an AI to confirm expertise.

Required actions:

1. **Create an author page** at /da/about/peter-bjerring with full medical biography, credentials, and publications list
2. **Expand the Person schema** on the About page to include full credentials, @id reference, and URL
3. **Add author links** under every blog article that point to the author page
4. **Add Brian Vangsgaard** as a second Person schema entry with his founder/CEO story

● 5. Sitemap Shows Identical lastmod for All Blog Posts **CRITICAL**

Every blog URL in `sitemap.xml` carries the build timestamp as its `<lastmod>`:

```
<lastmod>2026-03-26T10:43:40.616Z</lastmod> ← build time, not publish time
```

AI crawlers use `lastmod` as a freshness signal. Each article needs its actual `datePublished` and `dateModified` tracked and passed to the sitemap generator.

Action: Update `src/app/sitemap.ts` to pull `datePublished` and `dateModified` from each blog post's frontmatter or data file.

HIGH PRIORITY

Part 2 — High-Priority GEO Improvements

● 6. Missing Schemas by Page Type

PAGE	MISSING SCHEMA	PRIORITY
Blog articles (19)	HowTo (treatment steps), ImageObject (cover), dateModified	CRITICAL
Guide	HowTo, VideoObject (if tutorial video exists)	CRITICAL
About	AboutPage, full Person schema for Peter + Brian	HIGH
Download	SoftwareApplication (the app itself)	HIGH
FAQ sub-pages	BreadcrumbList on all inner pages	MEDIUM
Homepage	AggregateRating + Review (patient testimonials)	MEDIUM

● 7. No ICD-11 MedicalCode on Disease Articles

Each of the 19 disease blog posts should include a structured medical code so AI engines can link content to authoritative medical knowledge graphs (WHO, ICD-11).

ED80 Acne vulgaris	EA80 Atopic dermatitis (Eczema)
EA90 Psoriasis	ED56 Rosacea
2C30 Melanoma	2C71 Basal cell carcinoma
2C72 Squamous cell carcinoma	1F40 Impetigo
1E74 Herpes simplex virus	1E89 Herpes zoster (Shingles)
1G04 Scabies	EC20 Vitiligo
EE40 Urticaria (Hives)	EA20 Lichen planus
1F01.1 Molluscum contagiosum	1F28–1F2F Tinea (Ringworm)

1B50 Cellulitis

EC10 Contact dermatitis

ADD TO EACH DISEASE ARTICLE SCHEMA

```

"diagnosis": {
  "@type": "MedicalCode",
  "code": "ED80",
  "codingSystem": "ICD-11",
  "name": "Acne vulgaris",
  "description": "Chronic skin condition characterized by comedones, papules and pustules"
}

```

● 8. No SoftwareApplication Schema for the App

The download page promotes the SKIND app but carries no structured data about the app itself. This prevents it from appearing in app search results and AI knowledge graphs.

```

{
  "@type": "SoftwareApplication",
  "name": "SKIND",
  "operatingSystem": "iOS, Android",
  "applicationCategory": "MedicalApp",
  "description": "Online dermatologist consultation app for Denmark. Get a skin diagnosis within 48 hours.",
  "offers": {
    "@type": "Offer",
    "price": "0",
    "priceCurrency": "DKK",
    "description": "Free download. Consultations from 298 DKK."
  },
  "aggregateRating": {
    "@type": "AggregateRating",
    "ratingValue": "4.8",
    "bestRating": "5",
    "ratingCount": "124"
  }
}

```

● 9. Missing GeoCoordinates in Organization Schema

The MedicalOrganization address has country/region but no lat/long. AI and map services need precise coordinates.

```

"geo": {
  "@type": "GeoCoordinates",
  "latitude": 55.3845,
  "longitude": 10.3878
}

```

```
"address": {  
  "@type": "PostalAddress",  
  "streetAddress": "Hindbærhaven 48",  
  "addressLocality": "Vejle Ø",  
  "postalCode": "7120",  
  "addressCountry": "DK"  
}
```

Note: Verify actual Vejle coordinates for Hindbærhaven 48, 7120 Vejle Ø.

● 10. Danish-Only Service Schema — Needs English Version

Your current Service schema describes the offering only in Danish. Add a separate English entry at /en/ with English-language description, service name, and areaServed: "DK".

CONTENT QUALITY

Part 3 — Content & Semantic Improvements

● 11. FAQ Answers Too Short for AI Extraction HIGH

AI Overviews need 3–5 sentences minimum in natural-language Q&A format. Current FAQ answers are often 1 sentence.

✗ Current Answer

"Du modtager en diagnose og behandlingsplan inden for 48 timer."

✓ Expanded Answer

"Når du har uploadet dine billeder af hudproblemet og betalt de 298 kr., gennemgår en af vores certificerede Speciallæger i hudsygdomme din sag. Du modtager svar — inklusiv diagnose og en personlig behandlingsplan — inden for 48 timer. Hvis vi finder tegn på noget alvorligt, får du klar besked om næste skridt. Behandlingsplanen kan inkludere recept, som du kan hente på ethvert dansk apotek."

Action: Expand ALL FAQ accepted Answers across all FAQ sub-pages to 3–5 sentences each, using natural conversational Danish/English.

● 12. Blog Articles Need More Internal Linking

Currently only the acne article cross-links to eczema. Every article needs:

- **Related conditions section** — link to 3–5 other relevant disease articles
- **Author byline with link** — "Skrevet af Peter Bjerring →" linking to author page
- **CTA block** — "Få en diagnose med SKIND →" linking to download
- **"Last updated" date** visible in article body
- **Sidebar or bottom section** linking to relevant FAQ sub-pages

● 13. Consistent Q&A Subheading Patterns

AI extracts answers from heading + paragraph pairs like ## Hvad er acne? + paragraph. Audit all 19 articles — any that don't follow this pattern should be updated to include descriptive <h2> subheadings above every Q&A section.

● 14. FAQ Schema on Non-FAQ Pages

Currently only the homepage has FAQPage schema. These pages should also carry FAQPage schema for relevant common questions:

PAGE	FAQ QUESTIONS TO ADD
/da/download	"Which devices?", "Is the app free?", "How do I install?"
/da/about	"Who founded SKIND?", "Are dermatologists certified?", "Is my data safe?"
/da/contact	"How do I reach support?", "What languages?", "Response time?"

● 15. Patient Testimonial Schema

The homepage has a testimonial section but no Review/AggregateRating schema. Add this to the homepage JSON-LD:

```
{
  "@type": "Review",
  "reviewRating": { "@type": "Rating", "ratingValue": "5", "bestRating": "5" },
  "author": { "@type": "Person", "name": "Jofrajen" },
  "reviewBody": "Havde et stort modermærke på ryggen...",
  "itemReviewed": { "@id": "https://www.skinchange.dk/#service" }
}
```

TECHNICAL ISSUES

Part 4 — Technical & Structural Issues

og-image.jpg Missing

The og:image reference points to /og-image.jpg which appears to be missing or a placeholder. Create a branded 1200x630px image with SKIND logo + tagline for social sharing and AI chat previews.

Google Verification = Placeholder

google-site-verification: your-google-verification-code needs the real value from Google Search Console to enable indexing control and CWV data.

hreflang Region Codes

Current: hreflang="da" and hreflang="en".
Should be: hreflang="da-DK" and hreflang="en-GB" for full regional specificity.

No BreadcrumbList on Inner Pages

Blog articles, FAQ sub-pages, About, and Download pages are all missing BreadcrumbList schema. Add this to all inner pages.

Article Images Not ImageObject

Blog article image is a string URL. Should be a full ImageObject with width, height, and caption for rich image search.

Video Tutorial Opportunity

If a video guide exists or can be created, add VideoObject schema to the guide page — high-value for AI Overviews.

ACTION ROADMAP

Part 5 — 4-Week Prioritized Roadmap

WEEK 1

Foundation — Critical Fixes

Do these first

- ☐ Delete all `index.txt` files from `/dist/` — stop plain-text fallback generation Critical
- ☐ Add `HowTo` schema to `/guide/` page (step-by-step app usage) Critical
- ☐ Add `SpeakableSpecification` to all `Article` + `FAQPage` schemas Critical
- ☐ Fix sitemap `lastmod` to use actual per-article publish dates Critical
- ☐ Create/replace `/og-image.jpg` with branded 1200x630px image Critical

WEEK 2

Schema Depth — E-E-A-T + Medical Codes

Build authority signals

- ☐ Add `MedicalCode/ICD-11` to all 19 disease articles Critical
- ☐ Add `SoftwareApplication` schema to download page High
- ☐ Create author page for Peter Bjerring at `/da/about/peter-bjerring` Critical
- ☐ Expand `Person` schema on About — full credentials + `@id` match Critical
- ☐ Add geo-coordinates to `MedicalOrganization` schema High
- ☐ Add `AggregateRating` + `Review` schema to homepage Medium

WEEK 3

Content Quality — Depth & Structure

Improve AI readability

- ☐ Expand ALL FAQ acceptedAnswers to 3–5 sentences each High
- ☐ Add FAQPage schema to Download + About + Contact pages Medium
- ☐ Add related-articles section (3–5 links) to all 19 blog posts Medium
- ☐ Audit all blog articles for h2 + paragraph Q&A patterns Medium
- ☐ Add BreadcrumbList schema to all inner pages Medium

WEEK 4

Refinement — Polish & Monitoring

Final checks

- ☐ Fix hreflang to use region codes: da-DK, en-GB Medium
- ☐ Replace placeholder Google verification code with real value High
- ☐ Audit all images for descriptive alt text Medium
- ☐ Add VideoObject schema to guide if video exists Medium
- ☐ Submit updated sitemap to Google Search Console Medium
- ☐ Set up Search Console monitoring and error alerts Medium

APPENDIX

Appendix — Schema Reference

SCHEMA TYPE	USE CASE	PAGES
HowTo	Step-by-step instructions	Guide page
SpeakableSpecification	AI-quotable sections	All Article + FAQ pages
MedicalCode / ICD-11	Disease classification	All 19 disease articles
SoftwareApplication	Mobile app	Download page
AboutPage	About the organization	About page
BreadcrumbList	Navigation path	All inner pages
Review + AggregateRating	Patient testimonials	Homepage
ImageObject	Proper image metadata	All pages with images
GeoCoordinates	Physical location	Organization schema
Person (expanded)	E-E-A-T for content	About + Author page
VideoObject	Video tutorial	Guide page (if video exists)

Priority Summary

 Critical (5)

Delete .txt fallbacks · HowTo on guide ·
SpeakableSpecification · Author depth · Sitemap
freshness

 High (5)

ICD-11 on all disease articles · SoftwareApplication ·
Author page · GeoCoordinates · FAQ answer
expansion

 Medium (7)

Breadcrumbs · og-image · hreflang fix · ImageObject ·
FAQ on non-FAQ pages · Internal linking · Testimonial
schema

 Low (1)

VideoObject on guide (if video created)
